What's on your mind?

Adriel Hampton
Scott, have you written a case study about USGS on Facebook? If so, I'd love to include it as background material in an upcoming international gov2 workshop I'm doing in Malaysia. Would also like to get you and a couple of the USGS page team members on Gov 2.0 Radio this spring.

Scott Horvath (USGS) No, I haven't written a case study. However, I will be giving an Ignite presentation on the 17th at the 2011 Government Web and New Media Conference. Certainly interested in the Gov 2.0 radio as well. Let me just touch base with a few people first and I'll let you know. Thanks for the offer.

Scott Horvath (USGS) commented on Social Media News and Web Tips - Mashable - The Social Media Guide on mashable.com.
This is an interesting idea and one that I can see as a way to encourage discussions between Government and the public through government sites and government Pages. However, the one thing that will be tricky for integration on a government site would be d...

What a great site. I found you just from surfing around online looking for "earthquake" info for the West Coast. Originally from the Bay Area but currently live in CO. Will be traveling to South CA during Spring Break and feeling a bit of anxiety thinking in terms of earthquakes knowing all the fault lines that travel North to South in CA. LOVE that your online site has up to the minute earthquake activity...thank you for your knowledge

Hi USGS! Thank you for the time you take to help keep people as safe as you possibly can! Technology has helped us in so many ways and I'm a person that's always loved earth science. I do have a question (when you get the time!) about the Pacific Plate involved in this situation in Japan. Being on the other side of that Plate on t...

I'm very curious after reviewing the most recent earthquake activity on your website, especially all the high magnitude activity in and surrounding Japan, how this calamity could not have been predicted. Are there warning signs with this science so people can take action sooner?

Green Idiots
I am an idiot in earthquake science, but has got one very basic topic for discussion: Does the fossil fuel or liquid hydrocarbons beneath earth or deep sea acts like shock absorbing liquids, and if we drill out that liquid do we replace it with same viscosity liquid? Does that mean more the drilling less the shock absorptions? I strongly believe that the natures fluid has got more role to play than just ENERGY? Need expert opinions?
